

DWA_08 Discussion Questions

In this module you will continue with your “Book Connect” codebase, and further iterate on your abstractions. You will be required to create an encapsulated abstraction of the book preview by means of a single factory function. If you are up for it you can also encapsulate other aspects of the app into their own abstractions.

To prepare for your session with your coach, please answer the following questions. Then download this document as a PDF and include it in the repository with your code.

1. What parts of encapsulating your logic were easy?

Creating the function for the default HTML

It basically just required copy pasting code from one section of code into another book preview function as the logic was the same.

2. What parts of encapsulating your logic were hard?

Creating new functions that would replace code redundancy and knowing what to place in certain functions

3. Is abstracting the book preview a good or bad idea? Why?

It is definitely a good idea.

The same code snippet was used in 3 different areas, putting all the logic into one function and using it where need is a solution to the redundancy
